## Bulb Project

### Hypotheses to be Tested in the 2017-18 Project

Hypotheses:

1. Schools that record higher temperatures during the Bulb Project will have the earliest flowering daffodils. The effect of temperature will be more pronounced with the daffodils in pots compared to those in the ground.
2. Schools that record more daily rainfall during the Bulb Project will have the earliest flowering daffodils.
3. On average, daffodils in pots will flower before those planted in the ground.
4. Schools in areas with higher temperatures will record taller daffodil flowering heights.
5. Schools in the area with the highest level of rainfall will record taller daffodil flowering heights.
